## MOON SIGN BOO PLANT BY THE MOON

256 Pages
By Llewellyn George Well Known Author-Lecturer

The Moon Sign Book gives complete instruction in the use of planetary influence on planting and harvesting, also business and personal affairs, etc., the result of more than thirty-five years of research. Why do farmers plant Potatoes in the dark of the the moon? When should Corn. Beans, etc., be planted? Why florists plant seeds in the

2nd quarter and a certain Moon Sign? Why you should plant flowers in Libra on a certain date and Moon's phase? These and many other questions are answered and explained in a simplified yet scientific manner. The Moon Sign Book has been published annually each year.

# CLIMBING TRIP-L-CROP TOMATO

Climbing Trip-L-Crop Tomato is by far the most productive of all Tomatoes, often producing 2 to 3 bushels from one vine. The plants are of rank growth, sending out long runners capable of setting clusters of fruit at each joint. This feature is not found in ordinary varieties.

Climbing TRIP-L-Crop is a variety with many superior qualities. Vines grow rapidly to a height of 10 to 18 feet (sometimes more than 20 feet) when grown on a trellis. A trellis, however, is not necessary as it will outyield other varieties when grown in bush form. The beautiful, large crimson fruits average 3½ inches across and 2¾ inches deep, with some as deep as 3½ inches and as wide as 5 inches across. The fruits are solid with meaty center surrounded by small seed cells which are separated by solid divisions, which makes the tomato unexcelled for both slicing and canning. It is free from blight and disease and dreight resistant. It is not unconvented to the solid divisions which makes the tomato unexcelled for both slicing and canning. It is free from blight and disease and drought resistant. It is not uncommon to pick more than two bushels of ripe tomatoes from one vine. The increasing demand for seed substantiates all the claims we make for this wonderful Tomato. For big yields and tall vines start early and set out as soon as danger from frost is past.

Pelleted Seed pkt. 45c

Unpelleted Seed pkt. 40c; ½ oz. 60c; oz. \$1.00 prepaid. Choice Greenhouse-grown plants 12 for \$1.20; 24 \$2.00

For shipment from April 1 to June 1 only.

### MAKE MORE MONEY IN 1952

Have the right Variety of Lespedeza to Command Top Prices for your seed. Others are doing it. Why not YOU?

The new varieties of Lespedeza are producing more hay, better pasture, heavier The new Varieties of Lespeuez are producing indie lay, better pastic, heaver seed crops than the old Korean variety. You know how difficult it has been to sell Lespedeza seed the last two years while the new varieties were very much in demand and commanding a premium price. Make up your mind this year to have the best on your farm by planting these early varieties.

## NEW! WILT-RESISTANT IOWA 6 LESPEDEZA

EARLY — FINE LEAF — HEAVY PRODUCER — DISEASE RESISTANT The newest introduction in wilt-resistant early Lespedeza. Iowa 6 has proven the most satisfactory Lespedeza grown by many of our seed growers. Iowa 6 starts off very quickly in the Spring and is apparently free from bacteria wilt. We find that very quickly in the spring and is appearency need from bacteria with, we find that it grows as tall as any of the early Lespedeza varieties. It has very fine leaves and stem which makes it more desirable for hay. Our growers are harvesting as much

as 800 to 900 pounds of clean seed to the acre and has proven to be a real money maker. You will hear a lot more about Iowa 6, Be one of the first to grow it. While our supply of seed is very limited we can take care of you if you order early.

## Early 19604 Lespedeza—Has Been Known as "Early Giant" Averages 6 inches Taller-Early Maturing-Heavy Yielding-Drought Resistant

Averages 6 inches Taller—Early Maturing—Heavy Yielding—Drought Resistant

Farmers are realizing what it is doing and the acreage is expanding fast. One of our good growers
tells us that no farmer should be without at least a few acres of early Lespedeza, During hot summer months when many pasture crops are dormant, this crop is beautiful dark green and making
its best growth. It has a great producing capacity at the time of the year you need it most. It provides
an abundance of high protein feed and enriches the land like other legumes.

Another big feature about early 19604 is that your seeding makes an early start and grows more
vigorously than ordinary Korean. The seed is mature, ahead of regular Korean, giving it an opportunity to reseed itself and for the harvest of a seed crop, where often times Koran is caught by unfavorable weather.

orable weather.
